

Your field team, *in view*

An office view of approved runs
for employees and project managers
in the field.

Mac preview for customer discussion

Illustrative scene

Office coordination

01

Where are they?

Latest shared location, with the time the phone recorded it.

02

What is next?

Remaining stops and the next-stop ETA, when the phone shares them.

03

How long at the stop?

Arrival, time at a stop and departure where the received information supports them.

Use the view to prepare a handoff, coordinate the next visit or decide when a call would help.

The phone and the office dashboard

IN THE FIELD

Just Route It

On each person's iPhone

Plan stops and navigate.
Approve sharing with one viewer.
Use Private, resume or stop.

IN THE OFFICE

Just Routed

On the office Mac

Select an approved person.
Follow the received run updates.
Review movement and stop history.

Each phone approves one viewer. The same office viewer can follow several approved people.

The approved run at a glance

Latest location time

10:42 AM

Stops remaining

2

Estimated next arrival

10:49 AM

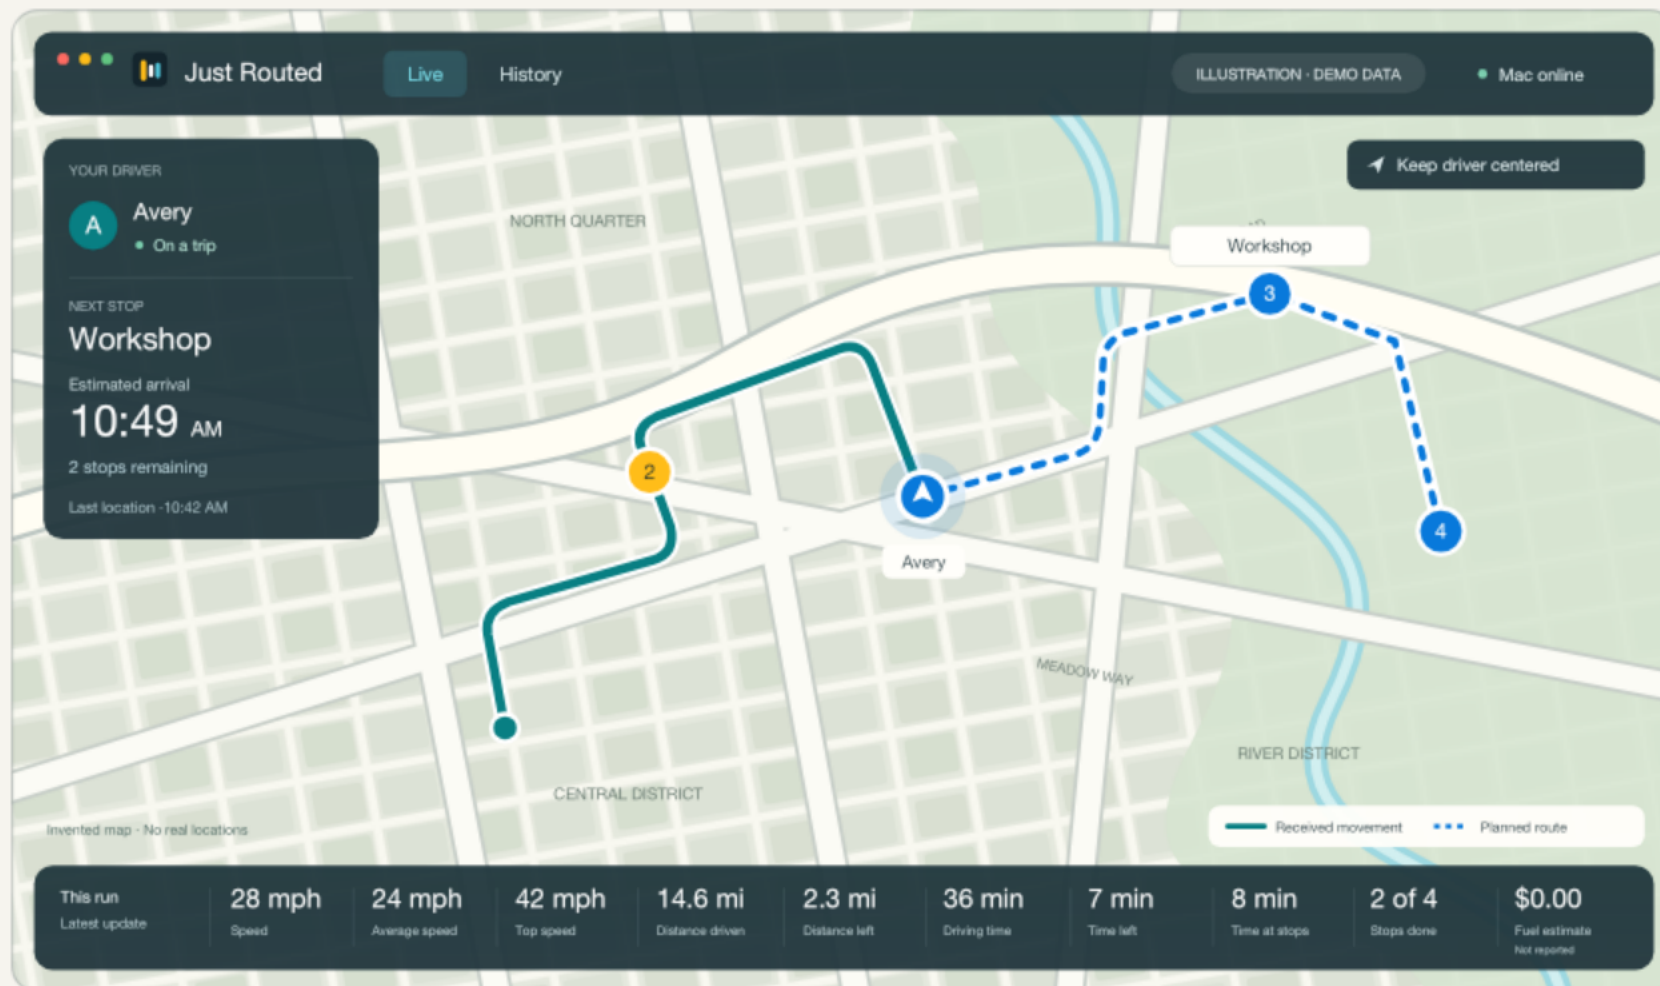

Illustration with fictional driver, map and numbers. Arrival time is an estimate.

Arrival, dwell and departure

An example visit

Arrived	Observed time at stop	Left
9:18 AM	8 min	9:26 AM
Reported by the phone	Minimum observed duration	Approximate, from movement

The last update stays dated. A departure needs supporting information from the phone or received movement.

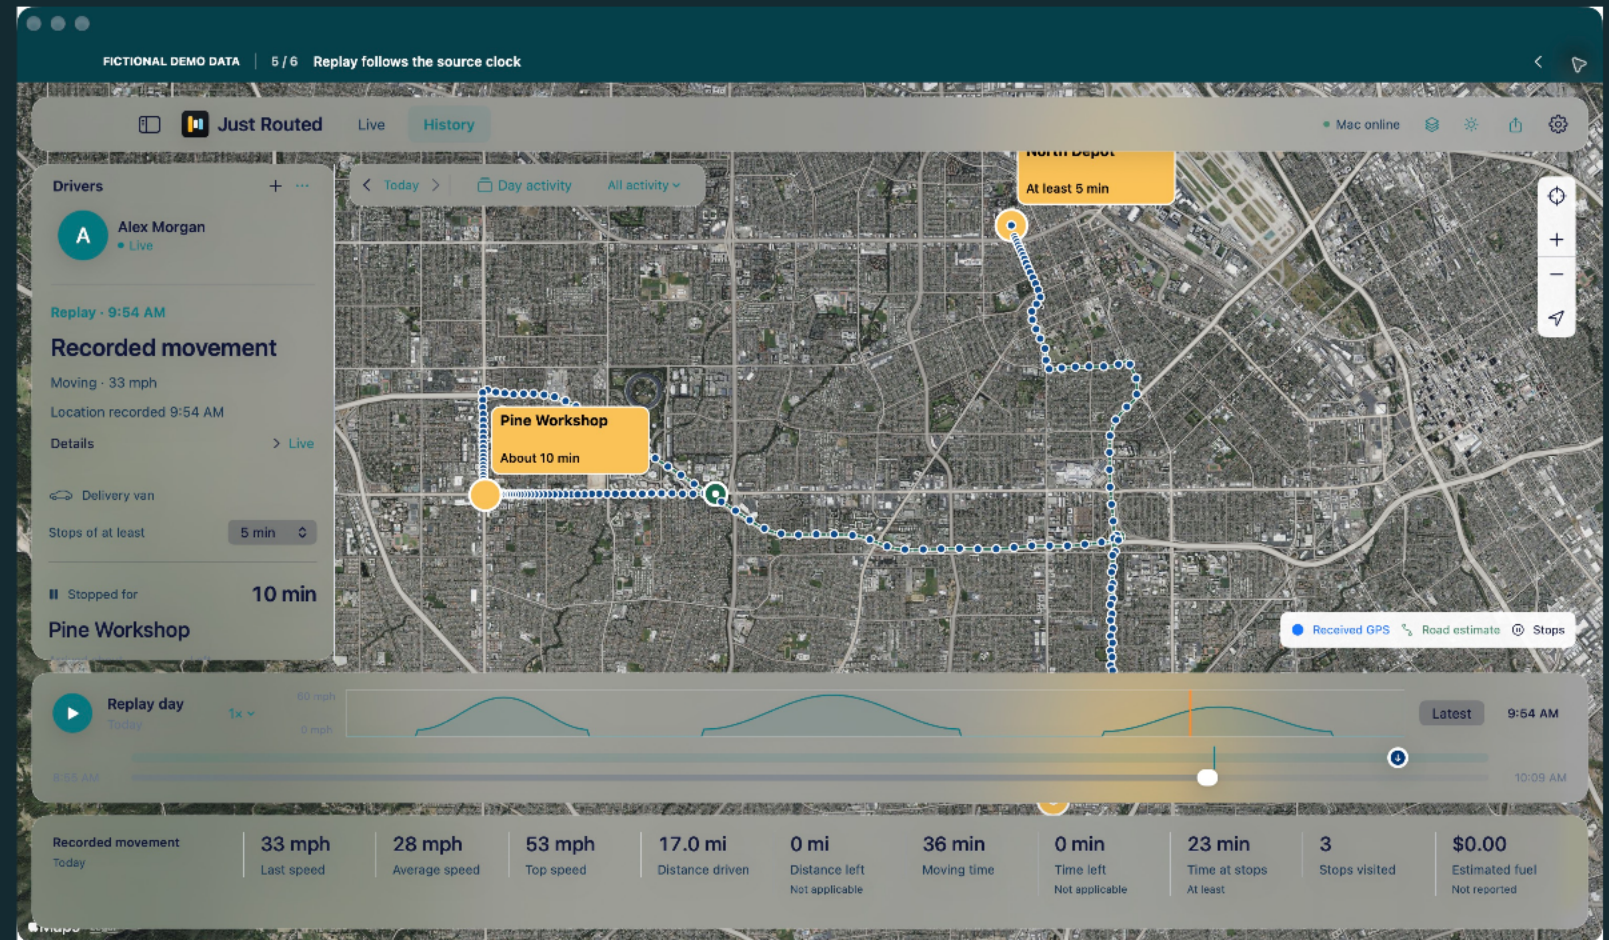

Fictional example. Reported events and detected timing stay labeled.

The received day stays reviewable

Replay received travel

Review stops and
time on site

Save a daily PDF or
CSV

Fictional app demonstration

Sharing status stays explicit

What the office sees	What it means
Private	The driver paused new phone updates. Resume keeps the private gap.
Updates paused	The viewer paused reception on this Mac. The connection stays.
Sharing ended	Future updates ended. The driver's action is named when confirmed.
Delayed update	The last location is older. Its timestamp remains visible.
Missing observations	The interval has insufficient evidence. The path keeps a gap.

Stopping sharing cannot recall information already received or exported.

What an office rollout needs

Illustrative scene

An office Mac

Just Routed provides the approved viewer's dashboard.

Compatible iPhones

Just Route It and the required sharing permissions.

An agreed sharing routine

Who shares work runs, who views them and how exports are handled.

Mac preview access, scope and pricing need agreement. Complete the background/offline recovery check before rollout.

A proposed one-week pilot

1

office Mac

2–3

field iPhones

1

working week

Before

Confirm access, pair and run a controlled background/offline check.

During

Use ordinary work runs and log confusing or missing updates.

Review

Compare check-in calls, stop-history usefulness and staff feedback.

First decision: who will view from the office, and who will share from the field?
